Education

B.M.S. College of Engineering — *B.E. in Computer Science & Engineering*
CGPA: **8.29**

Expected June 2027

Narayana PU College — *12th, Karnataka State Board* **94.33%**

May 2023

Technical Skills

Languages: Python, Java, C, JavaScript, TypeScript, Swift, SQL

Frameworks & Databases: FastAPI, React, Tailwind CSS, SwiftUI, PostgreSQL, SQLAlchemy, Alembic, Redis, Celery, Vite

AI / ML: LLMs, Prompt Engineering, Claude & Gemini APIs, RAG, PPO Reinforcement Learning, Deep Learning, NLP, Multimodal Fusion (CLIP), LangChain, ChromaDB

Tools: Git/GitHub, Docker, AWS EC2, GitHub OAuth/Webhooks, Xcode, Figma, Jupyter Notebook, VS Code

Coursework: Machine Learning, Linear Algebra, Probability & Statistics, Data Structures & Algorithms, Advanced Data Structures

Projects & Research

Liffy — Open-Source AI Peer Code Review Tool (Project Lead) | FastAPI, Celery, PostgreSQL, Redis, React, TypeScript, ChromaDB, LangChain

🌐 [Site](#) [Code](#)

- Led the project as primary owner (top committer by a wide margin), defining a layer-ownership model with a collaborator across backend, frontend, and LLM-pipeline work
- Directed a self-hosted platform ingesting GitHub PR webhooks and generating line-anchored feedback via a RAG pipeline (ChromaDB + LangChain) grounded in the repo's code, with an async Celery + Redis job layer, a provider-agnostic LLM interface (Ollama, Gemini, Anthropic, Claude Code/Codex), and one-command bootstrap scripts for macOS/Windows

Askcal — AI-Powered Daily Scheduler | FastAPI, Claude, PostgreSQL, SwiftUI, Google OAuth

🌐 [Site](#) [Code](#)

- Built a regret-ranked inbox classifier that never asks the model for a score: it extracts stakes, sender, deadline and task signals, and deterministic arithmetic ranks each mail 0–100 behind confidence floors
- Shipped the SwiftUI iOS/iPadOS app over FastAPI/Postgres, scheduling tasks around real Google Calendar busy blocks; 282 backend tests in CI, refresh tokens encrypted at rest under rotatable keys

Schedulr — Interactive OS Concepts Simulator | React, TypeScript, Vite, Tailwind CSS, vitest

🌐 [Site](#) [Code](#)

- Co-built a client-side simulator spanning 15 modules across the full OS syllabus (scheduling, synchronization, memory, file systems), with a shared playback engine that steps, rewinds, and scrubs through pure-function algorithm traces instead of replaying execution; used by BMSCE students studying for the course
- Validated correctness with 194 tests pinned to Silberschatz worked examples, with genuinely reachable failure states — Dining Philosophers deadlocks live, Peterson's solution prevents the race

Tiket — Full-Stack Ticket Booking System | SwiftUI, FastAPI, PostgreSQL, AWS EC2, JWT

🔗 [Code](#)

- Designed and deployed a full-stack ticket booking system with concurrency-safe seat allocation (PostgreSQL `SELECT FOR UPDATE`), JWT auth, and AWS EC2 deployment — load tested at 12,441 concurrent requests with zero double bookings; built the SwiftUI frontend with real-time seat selection and dynamic barcode generation

Leadership

Senior Coordinator, Phase Shift 2025 — *BMSCE*

2024 – 2025

- Co-led logistics for BMSCE's annual technical fest; previously Junior Coordinator for Utsav 2025, managing design team and on-ground event operations
